

Checking for Windows Updates

1. Click the start menu and type **Window Updates** and click on **Check for updates**

2. A new window should open and then select **check for updates**.

3. If you click **check for updates** and it says **Updates are available** then it will automatically start downloading updates to your machine. If you clicked **check for updates** and it says **your device is up to date**, then you have no updates to apply.
